

Press Release

December 2017

Custom Marine Products has announced the availability of their new line of high performance marine solar panels. Made with high efficiency SunPower solar cells that have a rating of up to 23.7% efficiency, these panels have the highest output power per square inch of any marine solar panels in the industry. CMP solar panels are built to withstand the rigors of the marine environment with fully encapsulated junction boxes and durable sealants and materials.

High performance marine solar panels are available in both rigid and semi-flexible versions. Two popular panels are the 175 watt 36"x37" rigid panel ideal for top-of-pole mounting and the 160 watt 21"x60" rigid panel ideal for mounting on dinghy davits. The new 120 watt CMP semi-flexible panel is ideal for mounting on bimini canvas or a curved hardtop.
